

1. Added a new start page that shows how to use the app as a Tutorial (yet to upload the video). This is the starting point of the app - <https://aboutpage.streamlit.app/>
2. The login Page is fixed and authentication is based on the Email ID (Streamlit doesn't support Password authentication :( ) and has a new Feature called 'Role' based on the authentication of the Role (Admin or Not an Admin) the person gets access to different apps.
3. VK-0 and Schweißen combined into one because the old VK-0 is the Schweißen\_neu.
4. Navigation changes are completed.

Next step:

1. Migrate to a cloud platform (AWS).
2. Place the apps in a different folder(pages) that helps with the multipage - If the new Navigation is not preferred.
